

LAB MANUAL

Creating Accounts on Two AI Platforms and Comparing Their Responses to an Engineering Question

Course	Introduction to AI / AI Tools
Level	1st Year B.Tech
Experiment No.	1
Duration	45–60 minutes

1. Aim

To create accounts on two AI platforms and compare their answers to a simple engineering question.

2. Learning Objectives

- Understand how to access and use AI platforms.
- Learn how to write a simple prompt.
- Compare answers produced by two AI tools.
- Identify similarities and differences in AI responses.
- Understand that AI-generated answers should be checked for correctness.

3. Requirements

- Computer or smartphone with internet connection.
- An email account for creating/login to accounts.
- Two AI platforms, for example ChatGPT and Google Gemini.
- Notebook or document for recording the responses.

4. Basic Engineering Question

Prompt: “What is the difference between a conductor and an insulator? Give two examples of each.”

This question is simple and suitable for first-year B.Tech students.

5. Procedure

1. Open the website/app of the first AI platform.
2. Create a new account using your email, or log in if you already have an account.
3. Open the chat screen.
4. Enter the exact prompt given above.
5. Read the response and record it in your observation table.
6. Open the second AI platform and create an account or log in.
7. Enter the same prompt without changing the wording.
8. Record the second AI platform's response.
9. Compare the two responses for correctness, clarity, examples, and length.

10. Write your observations and conclusion.

6. Observation Table

Feature	AI Platform 1	AI Platform 2
Name of platform		
Definition of conductor		
Definition of insulator		
Examples given		
Easy to understand? (Yes/No)		
Response length		
Any important difference		

7. Comparison Questions

1. Did both AI platforms give a similar definition?
2. Did both platforms provide correct examples?
3. Which response was easier to understand?
4. Which response was shorter or longer?
5. Did either platform provide extra information?
6. What did you learn from comparing the two answers?

8. Result

Accounts were created/accessed on two AI platforms. The same engineering question was entered in both platforms, and their responses were recorded and compared.

9. Conclusion

Different AI platforms may provide answers with differences in wording, length, examples, and explanation style. Students should compare AI responses and verify important technical information before using it.

10. Viva Questions

1. What is an AI platform?
2. What is a prompt?
3. Why should we use the same prompt for comparison?
4. Can AI always give a correct answer?
5. Why should engineering information generated by AI be verified?
