

# LAB MANUAL

## One-Page Comparison of Five AI Tools by Category and Primary Use Case

**Course:** Introduction to AI / AI Tools    **Level:** 1st Year B.Tech    **Experiment No.:** 2    **Duration:** 45–60 minutes

### 1. Aim

To identify and compare five AI tools based on their category and primary use case.

### 2. Learning Objectives

- Understand different categories of AI tools.
- Identify the primary use of each AI tool.
- Compare AI tools based on their applications.
- Understand that different AI tools are designed for different purposes.

### 3. Requirements

- Computer or smartphone with internet connection.
- Internet browser.
- Access to AI tools.
- Notebook or document for recording observations.

### 4. AI Tools to Compare

| S.No. | AI Tool           | Category                     | Primary Use Case                                   |
|-------|-------------------|------------------------------|----------------------------------------------------|
| 1     | ChatGPT           | Generative AI / AI Assistant | Text generation, explanation and problem solving   |
| 2     | Google Gemini     | Generative AI / AI Assistant | Question answering and content generation          |
| 3     | Microsoft Copilot | AI Assistant                 | Productivity and information assistance            |
| 4     | GitHub Copilot    | AI Coding Assistant          | Code generation and programming assistance         |
| 5     | Canva AI          | Creative AI                  | Designing presentations, images and visual content |

### 5. Procedure

1. Open each AI tool or its official website/app.   2. Identify the name of the AI tool.   3. Identify its category.   4. Identify its primary use case.   5. Record the information in the comparison table.   6. Compare the five AI tools.   7. Identify how their purposes differ.   8. Write the observations and conclusion.

### 6. Observation / Comparison Table

| Feature          | Tool 1  | Tool 2 | Tool 3  | Tool 4         | Tool 5   |
|------------------|---------|--------|---------|----------------|----------|
| AI Tool          | ChatGPT | Gemini | Copilot | GitHub Copilot | Canva AI |
| Category         |         |        |         |                |          |
| Primary Use Case |         |        |         |                |          |
| Main Application |         |        |         |                |          |
| Easy to Use?     | Yes/No  | Yes/No | Yes/No  | Yes/No         | Yes/No   |

### 7. Comparison Questions

1. What is the category of each AI tool?   2. What is the primary use case of each tool?   3. Which tools are mainly used for text generation?   4. Which tool is mainly designed for coding assistance?   5. Which tool is mainly useful for creative design?   6. Why do different AI tools have different primary uses?

### 8. Result

Five AI tools were identified and compared based on their category and primary use case.

### 9. Conclusion

Different AI tools are designed for different purposes. Understanding their categories and primary use cases helps users select an appropriate AI tool for a particular task.

### 10. Viva Questions

1. What is an AI tool?   2. What is meant by an AI tool category?   3. What is a primary use case?   4. What is generative AI?   5. Why are different AI tools used for different purposes?
