

LAB MANUAL

Identifying an Academic Task Where an AI Tool Could Help

Course: Introduction to AI / AI Tools **Level:** 1st Year B.Tech **Experiment No.:** 3 **Duration:** 45–60 minutes

1. Aim

To identify a simple academic task where an AI tool can help a student and observe how the AI tool supports the task.

2. Learning Objectives

- Identify an academic task suitable for AI assistance.
- Learn how to write a simple prompt for an academic task.
- Observe the response generated by an AI tool.
- Understand that AI output should be checked before using it.

3. Requirements

- Computer or smartphone with internet connection.
- An AI tool such as ChatGPT or Google Gemini.
- Notebook or document for recording the response.

4. Academic Task

Task: Prepare a short summary of a topic for examination revision.

Example Topic: Artificial Intelligence (AI)

Prompt: "Give me a simple 5-point summary of Artificial Intelligence for first-year B.Tech students."

5. Procedure

1. Open an AI tool such as ChatGPT or Google Gemini.
2. Enter the given prompt.
3. Read the AI-generated summary.
4. Record the important points in your notebook or document.
5. Compare the AI response with your textbook or class notes.
6. Identify any missing or incorrect information.
7. Write your observation and conclusion.

6. Observation Table

Feature	Observation
Academic task identified	Preparing a short study summary
AI tool used	_____
Prompt given	5-point summary of Artificial Intelligence
Was the response easy to understand?	Yes / No
Was the response useful for revision?	Yes / No
Any incorrect or missing information?	_____

7. Comparison / Discussion Questions

1. What academic task was selected?
2. How did the AI tool help with the task?
3. Was the AI-generated summary easy to understand?
4. Did the AI response contain any missing or incorrect information?
5. Why should students verify AI-generated academic information?

8. Result

An academic task—preparing a short study summary—was identified, and an AI tool was used to assist with the task.

9. Conclusion

AI tools can help students with simple academic tasks such as summarizing topics, generating study points, and explaining concepts. AI-generated information should be checked with textbooks or class notes before use.

10. Viva Questions

1. What is an academic task?
2. Give one example of an academic task where AI can help.
3. What is a prompt?
4. Why should AI-generated information be verified?
5. Can AI completely replace a student's learning?

Student Name: _____ Roll No.: _____ Date: _____ Faculty Signature: _____
